

Your Brain on Art Presents...

The Culinary Exquisite Corpse

Tuesday, May 16, 2017

5 - 6 p.m.

Spec's Beverage & Food Appreciation Lab, Room S116

Hilton University of Houston, 1st floor of the South Wing

The University of Houston **Conrad N. Hilton College of Hotel and Restaurant Management** and the **Cullen College of Engineering's Laboratory for Noninvasive Brain-Machine Interface (BMI) Systems** are collaborating to show the brain activity associated with the creative process of producing original recipes. During this demonstration, culinary artists will be outfitted with brain sensing caps to play the culinary version of the "Exquisite Corpse." This collaborative, chance-based game was made famous by the Surrealists. The demonstration will be followed by a Q&A session with the participants and led by **Cullen Professor Jose "Pepe" Contreras-Vidal**, director of the BMI lab, and Brane Poledica, director of Food & Beverage at the Hilton University of Houston.
